SWITCHMODE SERIES
NPN SILICON POWER TRANSISTORS

These transistors are designed for high-voltage,high-speed, power switching in inductive circuits where fall time is cirtical. They are particularly suited for line-operated switchmode applications.The MJ16008 is a selected hihg-gain version of the MJ16006 for applications where drive current is limited

Typical Applications:
* Switching Regulators
* Inverters
* Solenoid and Relay Drives
* Motor Controls
* Deflection Circuits

Features:
* Fast Turn-Off Times
* Operating Temperature Range - 65 to +200°C
* 100°C Performance Specified for:
  - Reverse-Biased SOA With Inductive Loads
  - Switching Times With Inductive Loads
  - Saturation Voltages
  - Leakage Currents

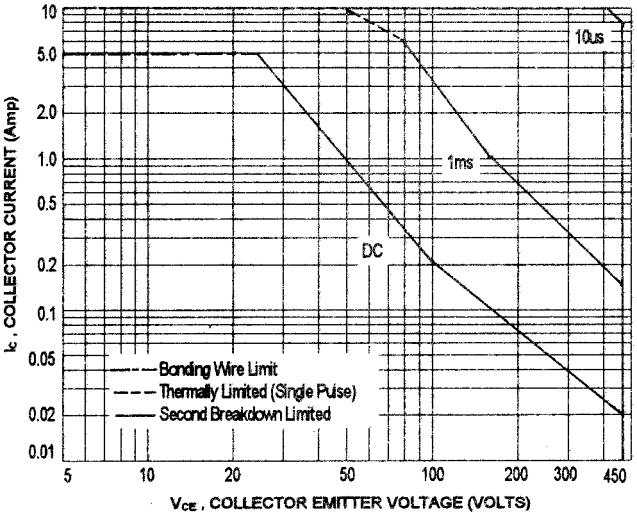
FIG-8 FORWARD BIAS SAFE OPERATING AREA

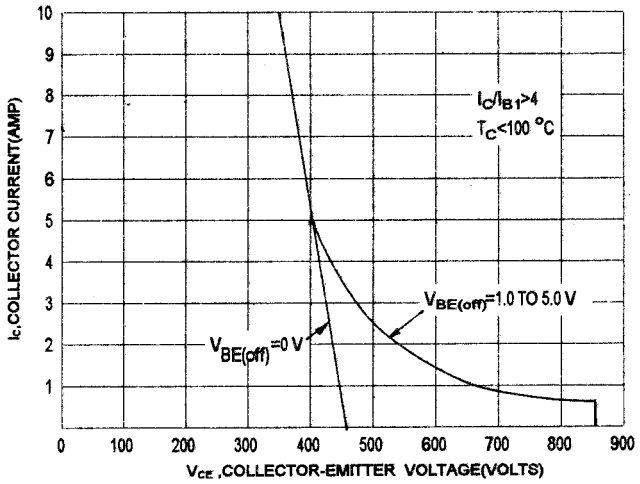


FORWARD BIAS

There are two limitation on the power handling abiity of a transistor:average junction temperature and second breakdown safe operating area curves indicate I_C-V_{CE} limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of FIG-8 is base on $T_{J(PK)}$=200 °C;T_C is variable depending on conditions.At high case temperatures , thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.

FIG-9 REVERSE BIAS SAFE OPERATING AREA



REVERSE BIAS

For inductive loads, high voltage and high current must be sustained simultaneously during turn-off,in most cases, with the base-to-emitter junction reverse biased Under these conditions the collector voltage must be held to a safe level at or below a specfic value of collector current.This can be accomplished by several mean such as active clamping, RC snubbing, load line shaping, etc. the safe level for these devices is specified as Reverse Bias Safe Operating Area and represents the voltage-current condition allowable during reverse biased turn-off. This rating is verified under clamped conditions so that the device is never subjected to an avalanche mode. FIG-9 gives the RBSOA characteristics.
